

## Hot Tub Guidelines

The hot tub is maintained on a regular basis. The chemical balances are checked prior to your arrival to ensure that it is clean and safe. With appropriate care, there should be no need to make any adjustments to the chemicals.

For daily water maintenance, all you need to do is remember to remove the floating dispenser, if applicable, before bathers enter the tub and to put it back into the tub after each use.

Please, for safety's sake, observe a reasonable time limit when soaking in a hot tub. Long exposures may result in nausea, dizziness or fainting. Typically, 10 -15 minutes is the maximum suggested time. Leave the hot tub immediately if you feel uncomfortable or drowsy.

If you have a medical problem, please consult a physician before using a hot tub. Hot tub use is not advised for infants or young children, if you are pregnant, if you have circulatory or other heart problems, or if you have recently engaged in vigorous exercise.

Alcohol and hot tub use do not mix. The effects quadruple, are sudden and can be quite alarming. And please, take no food or drink into the tub. An accidental spill can wreak havoc with the chemicals – to say nothing of the cleanliness.

Please have a short cleansing shower before entering the tub. Body lotions, sunscreens hair products, shampoos and soaps cause water clarity and foaming problems. Lotions and sunscreens plug up the filters. Also, to avoid taking debris into the tub with you, please wipe your feet before getting into it.

Please be careful when taking the cover off and when putting it back on again. The covers can rip if handled roughly. We also ask that you not adjust the jets and that you do not attempt to adjust or remove the head rests.

Do not add anything to the water (even if the product states it is safe for use in hot tubs).

Children must be supervised at all times when in or around the hot tub and to ensure their safety, please keep the cover on and secured when it is not in use.

Thank you.
